

Fast-track your ISO 27001 implementation

An affordable way to implement the standard.
An easier way to manage your ISMS.

**Prepared plans. Connected processes.
The documentation and evidence to move forward.**

LESS WORK BEFORE THE REAL WORK

Start with a plan. Move forward with confidence.

A prepared route through implementation helps your team turn ISO 27001 requirements into practical action.

Actual ISMS Workspace showcase · Illustrative demonstration data

Know the next step

Use the predefined implementation plan to organise your programme. See tasks, milestones and dependencies in a visual timeline, so the team can understand how the work fits together.

Spend less time building your toolkit

Start with 40 plus draft policies and procedures, prepared registers and built-in guidance. Adapt them to your business and focus your effort on implementation.

Use specialist support where it adds value

Built-in advice and AI support help your team progress with greater independence. Optional DPS implementation services provide additional expertise when you need it.

LESS SEARCHING. MORE ASSURANCE.

Keep documents controlled. Reduce administration.

Give your team a consistent home for the documents and records that support your ISMS.

Controlled ISMS documents					
Create policy draft					
Reference / title	Version	Status	Classification	Review	Actions
ISMS-042 · ISMS Manual General Misc	0.2	Draft	Internal	Review date required Last reviewed: Not recorded	Amend document record Read / history Edit in Word / upload Open in Google Docs

Actual ISMS Workspace showcase · Illustrative demonstration data

One place to find the current document

Search the document index by title, reference or process. Manage versions, status, classification, review dates and retained history; work with Word documents using the workspace controls.

A prepared starting point, personalised to your business

Adapt the draft documentation to your organisation, apply your branding and retain a clear record of revisions. Spend more time making the processes work and less time assembling disconnected files.

Make review responsibilities easier to manage

Version-specific review dates and visible review status help your team identify material that needs attention. Configuration control supports a clearer, more traceable document lifecycle.

TURN INFORMATION INTO ACTION

See the risk. Connect the response.

Give security teams a consistent way to record exposure, decide treatments and keep accountability visible.

The screenshot displays a web interface for recording risk information. At the top, a section titled "Linked threat intelligence" contains a link: "THR-1930 · Tabletop exercise: suspicious CRM export activity · Monitoring · Reassessment requested". Below this is a "Save risk" button. The form is divided into four fields: "Risk ID" with the value "RISK-002", "Risk category" with the value "Information security", "Asset / process" with the value "Microsoft Entra ID", and "Risk statement" with the value "Compromise of a privileged identity".

Actual ISMS Workspace showcase · Illustrative demonstration data

Keep the context alongside the decision

Record the asset or process, risk statement, causes, consequences and controls. Maintain treatment decisions, owners and review dates in the same working environment.

Connect threat intelligence with risk

The example shows a risk linked to a threat intelligence record and a reassessment request. Give the team a clearer route from emerging information to a reviewed security decision.

Maintain momentum after certification

Risk, change, corrective action and continual improvement registers support ongoing work. Assign responsibility and keep the next action visible as your organisation evolves.

MAKE AUDITS LESS DISRUPTIVE

Show the alignment. Find the evidence.

Bring your Statement of Applicability and supporting records into one intuitive solution.

Requirement	Maturity	Owner	Applicability / progress	Evidence
A5 - Organizational controls				
A.5.1 - Policies for information security	Optimised ★	Information security manager	Applicable Completed	All of the applicable information policies and procedures are in place and stored within the Document Index within the ISMS Workspace Document - ISMS-024 - Information Security Policy - External (Word) - Version 0.3 Document - ISMS-025 - Information Security Policy - Internal (Word) - Version 0.4 Assess

Actual ISMS Workspace showcase · Illustrative demonstration data

Explain your control decisions with evidence

The built-in SoA brings applicability, ownership, maturity and progress together with supporting evidence. Help auditors follow the link from a control to the documentation behind it.

Keep audit preparation connected to everyday work

Record decisions as you implement and maintain the ISMS. Organise supporting documentation and evidence where the team can find it, reducing the need to reconstruct the story before an audit.

MANAGE DAY TO DAY

Your core security processes in one working environment

Give your team a consistent place to manage security responsibilities, operational records and improvement.

01

Risks and improvement

Risk, change, corrective action and continual improvement registers keep decisions, actions and progress visible.

02

HR security

Manage starters, movers and leavers through structured HR security processes that support the employee lifecycle.

03

Access and IT processes

Built-in IT processes cover access controls, privileged accounts and password management.

04

Hardware and software assets

Maintain asset registers that support both asset management and business continuity planning.

05

Threats and vulnerabilities

Bring risk, vulnerabilities, threat intelligence and change management into your ongoing ISMS processes.

06

Supplier assessment

Use supplier management tools for risk assessments, combined with AI agents to support your team.

MAINTAIN MOMENTUM

Clear ownership. Visible evidence. Better control.

Support the people who run your ISMS and the governance that keeps it effective.

Actual ISMS Workspace showcase · Illustrative demonstration data

07 Governance and management review

Support the Information Security Working Group and Management Review Board with dedicated governance tools. Bring decisions and actions into a consistent management process.

08 Ongoing ISMS management

Use a dedicated area for ongoing ISMS management with task-based capabilities. Keep responsibilities and upcoming work visible, including personal assigned tasks.

09 Organisation personalisation

Apply your organisational context, document branding and user access arrangements. Make the workspace and its controlled material reflect your business.

CHOOSE YOUR PAYMENT OPTION

Affordable access. Organisation-wide value.

A company licence for the workspace, with no individual user licence charges.

01 3 year contract

Long-term commitment with one upfront licence payment.

£9,995.00

Paid up front

02 1 year contract

A full year of workspace access with an upfront licence payment.

£3,995.00

Paid up front

03 1 year contract

Monthly subscription payments across a 12-month contract.

£495.00

Per month

Standard onboarding fee

£895.00 per instance

The onboarding fee is additional to your chosen licence option.

Included in every contract

UK hosting, technical support and solution updates. Implementation and management support are available separately.

No VAT applies unless the client is in the EU. This applies to the licence options, onboarding fee and additional services shown in this brochure.

ADD SUPPORT TO SUIT YOUR TEAM

Add expertise when you need it

Choose additional professional services to help your team implement and maintain its ISMS.

ISO 27001 Implementation Management

£4,500.00

Professional support to manage your implementation programme. Agree the delivery scope with DPS around your organisation and priorities.

ISO 27001 Implementation Introduction Day

£995.00

A focused introduction to the implementation journey, helping your team understand the approach and how to get started.

ISO 27001 Implementation and Management Support

£195.00 per month

Ongoing implementation and management support for your team as it develops and maintains the ISMS.
